**PROJECT TYPE:** COMMERCIAL SITE PLAN    **CLIENT:** CAMP LAUREL  
**PROJECT NAME:** DINING HALL                      **LOCATION:** MOUNT VERNON,  
MAINE

**DESCRIPTION:** Main-Land conducted soil test borings and provided a report of geotechnical recommendations for the Architect to use in design and for the Contractor to use during construction. To protect foundation subgrade for footing support, Main-Land recommended pre-construction groundwater drainage and compacted fill beneath all footings and floor slabs. Main-Land provided observations during early earthwork for drainage of groundwater and to confirm that foundation subgrade conditions were in accordance with the design intent and the geotechnical recommendations.
