PROJECT TYPE: TOPOGRAPHIC SURVEY **CLIENT:** TREE STREET YOUTH FACILITY
PROJECT NAME: TREE STREET YOUTH FACILITY **LOCATION:** LEWISTON, MAINE

DESCRIPTION: Main-Land completed a topographic site survey and standard boundary survey of the Tree Street Youth Facility, approximately 0.8 acre, located on Howe Street in Lewiston. The project involved completing deed research and field work to determine the record boundary lines of the property, vertical and horizontal location to provide 1-foot contour mapping and the location of site features, such as edges of pavement, curbing, retaining walls, utilities, and fences. This data was compiled into an existing conditions survey plan, which was forwarded to Harriman, to be used as a “base map” for planning and design purposes.

CLIENT QUOTE: *“Being a young agency this was Tree Street’s first ever construction project. Main-Land’s work was imperative for us to begin the project with a strong foundation for which the project could begin. Main-Land was extremely professional, worked effective and efficiently and even kindly engaged questions of the young inquiring minds of the youth at the center who wanted to understand their work! We could not be more pleased with their service!”*
